

CSCI 2503 – Survey of Programming Language
Georgia Southern University
Department of Computer Science
Summer 2026

Assignment 6

Point Value: 20 points

Due: Thursday July 2, 2026, 11:59pm

Description

1. **Rust** – Complete the following requirements.

Reflect on your time working with and attempting to learn Rust.

QUESTION(S): Did you like working with Rust and why? Which parts felt straightforward to you and why? Which parts did you have issues with and why? What is your overall impression of Rust as a language?

Create a Word document and submit the answers to these questions.

2. **GUI Programming** – Complete the following requirements.

Experiment with building GUI applications using event handling in a language/framework that supports both features (this can be Java/JavaFX, C#/WinUI3, Swift, etc.).

Your application must allow the user to provide some type of action that initiates some computation(s) or action(s) and provides some type of visible change to the user based off of some event they initiate (button click, Enter key press, etc.). The application must use a minimum of 4 unique UI controls and visible functionality should exist for each control used (this can include displaying explanatory text directly to the user).

For instance, a simple application might ask the user for a birth year, and upon button click, display their current age in years, months, and days somewhere in the UI.

The UI controls should be laid out in an aesthetically pleasing manner and how the user will interact with the application should be considered in terms of layout. Imagine someone non-technical using your application. Do not submit an application used for a previous course.

QUESTION(S): Which GUI framework did you use and why? Was working in this language easy or hard and why?

Add the answers to the above questions in the Word document created in Problem 1.

Create a zip file and include the code for your application in this zip file.

3. Take a screenshot of your running application from Question 2. This screenshot should **not** be added to the code zip file. Add the screenshot to the Word document created for Problems 1 & 2.
4. Convert your Word document to a PDF before submitting it. This PDF should **not** be added to the code zip file.
5. Submit your **PDF** and **zip file** to the correct Folio Assignment dropbox. **Documents that are not submitted or not submitted in the requested format will not be graded and receive a grade of 0.**

Deliverables

Assignment 6 is to be individual work. Submit the required materials by the specified due date to the correct Folio dropbox.
